

Area of Application

ESSVE Programa Installation and adjusting key KMN is designed for installation and adjustment of the Programa Frame screws or Indu-Prog Frame sleeves, using a drill/power driver.

Installation

The end with the internal hex key is used for installation, this then grips both the sleeve and screw when screw together. The end which is bored out on the inside is used for adjustment, this only grips the sleeve to screw in or out.

Description

Manufactured of hardened steel.
